

KEY FEATURES

MQL4-coded automated system leveraging proven strategies to generate alpha in EUR currency pairs during Asian trading hours. Al-driven signals designed for subscribers seeking stable, mid-risk exposure and high-liquidity opportunities. Strong emphasis on capital preservation and disciplined risk management to deliver consistent weekly cash flows.

TRADING OBJECTIVE

Generate reliable weekly cash flows through fully automated trading in EUR currency pairs, employing built-in risk mitigation and systematic money-management protocols, while limiting maximum capital at risk to 30%.

Performance Review

Intelli Robo Eu is built for growth-focused investors seeking high returns through automated, high-frequency trading. With an average monthly return of +20.9%, the strategy capitalizes on market momentum while employing smart leverage to amplify gains. Though drawdowns of up to 30% have occurred, the system has shown strong recovery potential, rewarding long-term discipline. Its precision-driven approach requires a stable, low-latency infrastructure, making it ideal for investors who value performance, agility, and strategic risk-taking.

Risk Disclosure

Subscription to automated foreign currency trading signals involves a high level of risk and may not be suitable for all investors. The foreign exchange market is highly volatile, and the use of automated systems, while efficient, can lead to substantial losses as well as gains. Past performance of these signals does not guarantee future results. Leverage, execution delays, and unforeseen market conditions can magnify risks. You should carefully consider your financial situation and risk tolerance before acting on any trading signal. Only risk capital should be used, and professional financial advice is strongly recommended.
